CONTROLLED FLUIDS, INC.

YOUR MOTION
CONTROL &
FLUID POWER
PARTNER

FOR CUSTOM
SYSTEMS,
REPAIRS, &
FILTRATION

SUMMARY OF
SERVICES & SOLUTIONS

CUSTOM DESIGNED SOLUTIONS

Custom design and fabrication solutions to fit your needs, not someone else's.

No One Size Fits All

Every application has different requirements, meaning a cookie cutter solution might not have everything you need, resulting reduced production and higher operating costs. We will work with you at every stage to identify the budget and solution that best fits your needs, providing you with the perfect system to optimize your productivity and efficiency. You shouldn't have to worry about if a motion control system fits your application, you deserve a system that's built to meet your unique needs.

Finding The Right Fit For You

Settling on a solution that doesn't fit your needs can result in inefficient operation and lost time. Finding the right solution isn't just about skills in a single field, but everything from fluid power to electrical systems to fluid cleanliness.

You deserve a systems provider who will find exactly what you need and applies diverse proficiencies to provide the innovative solution that best fits your application. We work with our customers from concept to commissioning to find the solution that best fits their unique needs, and we will not stop until we find the correct solution.

Systems Documentation When You Need It

Not having access to system manuals and supporting information can lead to inefficient or unsafe operation as users might not know how to address issues as they arise in the field. Access to documentation is critical to ensuring operators have the knowledge and support to do the job. To ensure access to this information whenever and wherever it is needed, CFI stores all documents in a customer specific, password protected portal on our website. This access to systems information gives your team the knowledge and resources to maximize effectiveness and productivity.

Assured Reliability & Performance

Failure to properly vet a system prior to real world operation can lead to unforeseen faults and failures. Testing equipment under real world operating conditions is important in assuring reliability and longevity. All systems we build are tested throughout the fabrication process, giving you peace of mind that your system is ready for the job. To ensure that you have the certifications that you need, CFI is an ISO 9001 registered company and we understand Zone Rating, ATEX, and DNV requirements

CUSTOM DESIGNED SOLUTIONS

Custom design and fabrication solutions to fit your needs, not someone else's.

Improve Safety And Efficiency With Automation

Moving equipment, pressurized fluids, and the human element can be a dangerous combination as users can make mistakes that hurt people and damage equipment. Removing the potential for human error can make a worksite safer and more efficient for both assets and people. Automation and remote control in motion control systems can improve system safety by removing workers from the work area and allowing them to do their jobs from a safe distance. The result is a system that gives you a safe, simple to use, and reliable system so you can worry less about accidents and focus on production.

Lower Maintenance Costs And A Longer Operational Life

Proper design, fabrication, testing, filtration, experience, and high quality components ensure that all systems from CFI are low maintenance and long lasting. We apply our expertise in fluid conditioning and filtration to our system designs by incorporating filtration into systems to encourage proper fluid cleanliness, ensuring longer lower maintenance costs over a longer operational life.

Support When You Need It

Our customers don't always stop at the end of the day or take the day off on holidays, and neither do we. We are committed to providing true 24/7 customer service and support to all customers should an issue arise in the middle of the night or on Thanksgiving Day. All service or support calls to our on-call line are automatically forwarded to a representative who has the tools and support to find a solution to your issue. We also offer a spare parts program to provide rapid support for your system's key components.

Optimize Assets With System Upgrades

As technologies and regulations change, equipment may become outdated, leaving you with a suboptimal system. Although obsolete, your system may find new life and with system upgrades and modernization. By replacing obsolete parts and optimizing existing designs, you can maximize your system's capabilities. Upgrading an existing system ensures that you get maximum return out of your assets at a fraction lower cost than a new system, allowing you to focus your resources elsewhere.

REPAIRS & FIELD SERVICE

Full service repairs & field service delivering peak performance and quick turnaround.

Full Service Repairs & The CFI Advantage

Shoddy craftsmanship and cutting corners can lead to reduced production when a poorly repaired item inevitably malfunctions or underperforms. Which is why we repair to factory quality, giving you the comfort that your system has the rigorous testing, components, craftsmanship, and warranty that you'd expect from a brand new item. We believe you deserve a partner who takes ownership of your repair and works to deliver what you need, so you can focus on getting the job done.

The Service You Deserve

Time lost to faulty components is lost money, which means our business is getting you operational as quickly as possible. We work within our customer's time constraints to provide deliver repaired items when you need them. To get you back to work promptly, standard repairs are provided within 5-10 working days and rush repairs are available.

Commitment To Quality

A lack of quality control in a repair can quickly lead to unforeseen failures in the future. To ensure a quality and complete repair, all repairs are tested throughout the repair process under the system's anticipated operating conditions. For a complete view of the repair, failure analyses, evaluations, and replacement costing are provided to customers.

Field Service Where You Need It

Sometimes an issue arises that needs on the spot attention. In these cases you need a team with the training, experience, and resources to get the job done right. With CFI's field service team you will have the partner and support you need to get the job done quickly and efficiently.

Like New Repairs

A strong relationship between a supplier and distributor is integral in assuring to like-new quality repairs. CFI is an authorized distributor for Atos, Moog, and MTS. These manufacturers offer factory service, giving you peace of mind knowing that your repair has been repaired to factory standards and specifications with original factory parts and warranty. CFI is an authorized integrator for Moog Industrial and integrates Moog actuators to various process valves for the power generation industry and offers Moog actuator exchanges.

FLUID CONDITIONING & FILTRATION

Fluid conditioning products & solutions to ensure your systems are as efficient as possible.

Dirty Fluids Lead To Failure

Fluid contamination accounts for 75% of all hydraulic failures, resulting in inefficiency, lost production, increased maintenance hours, and costly repairs. Removing harmful contaminants from your systems improves performance and reliability, meaning you can focus on the job and not an underperforming system. We believe that you should stop worrying about if your systems might fail you. You deserve to be able to focus on serving your customers quickly, confidently, and effectively.

Stay Dry with Dehydration And Water Removal Systems

Water contamination drastically reduces bearing and component longevity by elevated moisture levels. Vacuum dehydrators optimize the balance between heat, vacuum, and process design to rapidly remove dissolved water and gas, keeping your oil clean, dry and healthy. Water removal elements provide additional protection against water ingress in hydraulic and lubrication systems. By keeping your oil clean and dry you can expect longer system life and greater reliability.

Keep Your Engines Running With Diesel Fuel Conditioning

Today's diesel engines require cleaner fuel with injector pressures leaving modern diesel engines vulnerable to particle and water contamination. Removing water and particles extends fuel injector life and increases combustion engine fuel efficiency. Conditioning your fuel during bulk tank fill, service truck filling, or as a kidney loop helps maintain clean and dry fuel.

Prevent Start Up Failures And Fluid Degradation

Particle build up, varnish, and acid will cripple any hydraulic or lubrication system by upsetting its internal workings. Fluid solvency and removing dissolved by-products are essential to preventing varnish deposits from developing and maintaining lower ISO codes. Address the root cause of deposit and acid formation with soluble varnish removal systems and ICB element upgrades.

Rental And Leasing Options Available

If you just need a temporary solution, CFI maintains a large fleet of rental equipment to assist customers with their fluid conditioning requirements. To ensure the highest quality rental fleet, all rental equipment represents the latest technology and models available and is maintained to strict standards. This fleet includes HPUs, filter carts, vacuum dehydrators, particle counters, and varnish removal skids. We offer monthly rental programs and "Lease to Own" options.

PRODUCT LINES REPRESENTED

We offer the very best hydraulic & pneumatic product lines with rental options available.

Accumulators Inc.	Brennan Industries	Flairline	MTS
Air Sentry	Camozzi	Freelin Wade	Nycoil
AKG	Canfield Connectors	Hach	Olaer
Allied Witan	CFI Custom Solutions	Hawe	Ortman
American	Coilhose Pneumatic	Hetronic	Parker
American Industrial	Continental	Hydrolico	RR USA
Anchor Fluid Power	Daman	Hy-Pro Filtration	Schrader Bellows
Atlas	Delta Motion	Kawasaki	Telepneumatic
Atos	Donaldson	Miller	Vescor
Aventics	Dwyer	Moog	Webtec
Badger Meter	FasTest	Moog Flo-Tork

OUR PHILOSOPHY & VALUES

Someone who understands the benefit of a long-term solution over a cheap fix.

We find well vetted and justified solutions that others haven't seen.

We offer continued support after the sale with real people, 24/7.

You want a partner to assist with your motion control and fluid power needs.

We work with you to better understand your unique needs.

Our efforts will result in improved efficiencies, less downtime, and a safer, more profitable operation.

ABOUT CFI

It's time for you to stop worrying about when your inefficient fluid power system will prevent you from being able to serve your customers. It's time to grow your business by maximizing production and minimizing downtime - saving you time, money and headaches.
