PATHFINDER 600 RIG WALKING SYSTEM

PATH FINDER

Certificate No. 7874

Patent Pending

Improving Rig Moves With Automated Rig Walking:

Moving a land rig into position can be a time consuming and hazardous process for both equipment and people. The Pathfinder 600 rig walking system enhances rig safety by removing workers from the drill site and minimizing the amount of equipment that needs to be disassembled for movement. This allows you to focus more on production and less on disassembling and reassembling your rig.

Divided Work - Multiplied Efficiency:

The revolutionary Pathfinder 600 rig walking system eliminates the maze of pipes and hoses associated with a large central HPU by putting highly efficient, compact HPUs directly at the point of work. Each HPU features a designated onboard controller that communicates wirelessly with a central HMI and remote, allowing each HPU to automatically provide the correct output for safe rig movement. Once these HPUs are connected with three phase power, they are able to automate and monitor the walking process via a wireless remote.

Enhanced Efficiency With Precise Positioning:

The Pathfinder 600's unique HPU arrangement provides enhanced control of rig feet versus traditional rig walking systems, enabling a 360° range of motion at a less than 1° margin during rig moves. This allows the rig to turn about a specific target or move along an arc to approach the next drill site from the optimal direction.

Faster Rig Moves Through Synchronized Expansion:

Rig moves don't just involve the drilling rig, so neither should your rig walking system. The Pathfinder 600's decentralized HPU control allows the system to be expanded from the typical four walking pods to an array of eight or more fully synchronized pods. This revolutionary design allows for ancillary equipment such as mud shakers to move in concert with the rig itself, allowing for faster moves and higher productivity.

Pathfinder 600 Highlights:

- Patent-pending design can be sized for and retrofitted to any existing rig or other equipment.
- Fastest system available with rig moves at up to 60' per hour.
- Only power required is incoming 480VAC - No external piping
- Fully self-contained onboard hydraulic system designed for efficiency, and built for reliability
- Wireless communication between walking pods and remote control that seamlessly coordinates all walking, steering, and rig rotation movements.
- Rig movements can be expanded to 8, 12, or more walking pods in order to synchronize ancillary equipment movement along with the rig.
